

Our Operators Can SEE

Pairing your
security system
to your
surveillance
system
produces a
unified security
solution
That works.

What Customers are Saying

"I can use my cameras by day and they can use them by night."

Retired Police Officer, David

"No more running up to the shop only to beat the police there and the thief...GONE."

Site Supervisor, Janet

"Multiple break-ins were the last straw! Now I can leave my lot with confidence knowing we are protected."

Tractor Dealership Owner, Chad

"No false alarms or dispatches since it was installed. Great job!"

Distribution Center Owner, Roy

"I have never felt like our home has been more protected when we are home or away."

Homeowner, Amy

YOU MAY NOT REALIZE

Purchasing an alarm and camera system does not guarantee operator access to the cameras during an alarm event. Although alarm systems are known to be highly accurate in detecting disturbances such as an open door or indoor movement, they do not provide visual evidence of the cause. This lack of information leads to a high rate of false alarms.

False alarms result in a slower response time from police, as they cannot prioritize them over genuine emergencies. To address this issue, we offer professional visual monitoring services, where your alarm and surveillance systems work together seamlessly. This way, our operators can instantly and clearly understand any incidents on-site during an alarm.

Your Security System Is Only As Good As The Response It Can Create.

Central Station Operator View

Provides:

Complete & Accurate Information

Your hard-earned assets deserve to be protected, and investing in security measures is a way to do so. In the event of theft or vandalism, timely and accurate information can greatly increase your chances of preventing a crime or capturing the culprit.

By having immediate access to the camera that is paired with the tripped sensor, operators can gain precise and accurate information to effectively communicate with police during the dispatch process. This level of detail can greatly enhance the effectiveness of your security system.

Visually verified alarm systems result in a prioritized police response in case of an incident on your property. With the verification that a break-in is occurring, police are able to respond more promptly, leading to increased intervention and a higher likelihood of apprehension.

In addition to prioritized response, law enforcement can also receive live updates from an operator with real-time access to all cameras on the property. This provides a more comprehensive and up-to-date picture of the situation, allowing for an even more effective response.

In the event that an operator is unable to visually confirm criminal activity, our verify feature allows for the central station to send video clips to designated key-holders for review. This gives you the final say on whether a police dispatch is necessary.

Additionally, each person on the call list can view the responses of others, allowing for a collaborative decision-making process. Reviewing the event on a mobile device also eliminates the need for unnecessary trips to a workplace or job site.

False alarms consume valuable resources from responding agencies that could otherwise be utilized to address actual crimes in progress. Fines and fees imposed on customers for false alarms, while necessary, can quickly accumulate and become a financial burden.

By utilizing a visually-verified alarm system, you greatly increase the chances of reducing or even eliminating false alarms, minimizing financial costs and freeing up valuable resources for responding agencies.

Faster Police Response Times

Reliable End-User Verification

Fewer False Alarm Dispatches & Fees
